

EASY TO INTEGRATE VIRTUAL E-LEARNING ENVIRONMENT WITH VOIP TECHNOLOGY

SANAKO Forum 100 allows a trainer to host a training session from anywhere and session members to participate from wherever they are. Even for the most remotely located participants, the trainer is always at hand for assistance and instruction. The advanced Voice over Internet Protocol (VoIP) technology in SANAKO Forum 100 offers voice communication for human interaction as well as progress and performance support in a virtual, online environment.

SANAKO Forum 100 trainer's software

EASY INTEGRATION

SANAKO Forum 100 has a dedicated audio server, so that audio communication does not use the resources of any other server. Since the Sanako Communication Server is pre-configured, Forum 100 is easy to add to any existing system.

EASY MANAGEMENT OF RESOURCES

SANAKO Forum 100 Administration Tool

Your Forum 100 server license allows for a certain number of concurrent users.

By making reservations for Forum 100 audio conferences, you ensure that enough resources are available for the training session when needed. With the Administration Tool, you can plan the sessions as well as keep track of Forum 100 training sessions taking place at different times and in different locations.

SYSTEM COMPONENTS

SANAKO Communication Server (SCS)

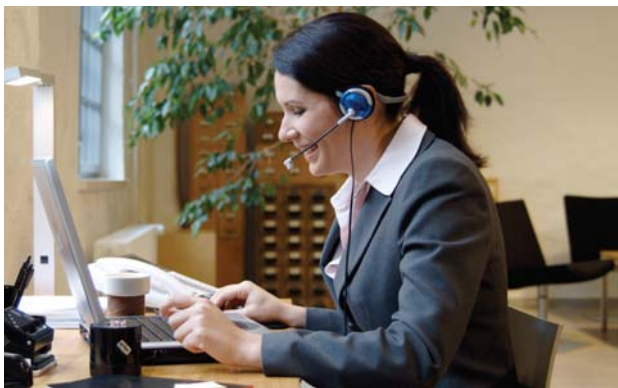

The Sanako Communication Server is used for real-time high-quality audio communication.

System Component Pack

The System Component Pack connects client software (Trainer's and participants' user interfaces and Admin) with server. The System Component Pack is installed on a Windows® server.

File Server

The File Server provides all the services that are needed for file transfer. All users can access the File Server using the same username and password. Forum 100 can also use the organization's existing file server, or it can be installed on the same server as the System Component Pack.

Participants are encouraged to absorb more information by using the wide variety of training tools available in Forum 100.
